Diptendu Bandyopadhyay

Bengaluru, Karnataka, India
+91 9123699177 — diptendusre@gmail.com
LinkedIn Profile

Professional Summary

Senior Reliability Engineer with **10+ years of experience** building scalable, highly available platforms across **banking, payments, insurance, and enterprise domains**. Expertise in **SRE, observability, production readiness, and SLO/SLI-driven reliability** across Kubernetes, OpenShift, and AWS. Strong experience in **performance engineering, CI/CD, infrastructure automation, chaos engineering, and incident management**, leveraging Dynatrace, Datadog, Grafana, New Relic, AppDynamics, ELK, Terraform, Shell, and Python. Proven track record of **improving platform reliability, reducing MTTR, automating operational toil, and strengthening production resilience**.

Technical Skills

Cloud & Infrastructure: AWS (EC2, ASG, EKS, ELB, VPC, S3, SNS), K8s, OpenShift,IAC(Terraform)
Observability Engineering: Dynatrace, Grafana, Datadog, New Relic, AppDynamics, Splunk, ELK Stack, Distributed Tracing, Synthetic Monitoring
Chaos Engineering: LitmusChaos, Chaos Mesh, Resilience Validation, Fault Injection
CI/CD & DevOps: Jenkins, ADO, Tekton, GitOps, Deployment Automation, Incident Automation
Performance Engineering: Apache JMeter, LoadRunner, K6, Performance Benchmarking,Capacity Planning, Reliability Testing **Automation:** Shell,python **Reliability Governance:** SLA, SLI, SLO, Error Budgets, Incident Management, Production Readiness, MTTR Reduction, Platform Engineering

Professional Experience

JPMorganChase – AVP(SREIII) Sept 2025 – Present
Bengaluru, India

- Designed and implemented Infrastructure-as-Code (IaC) based Datadog alerting for production applications using Terraform, integrating Geneos for centralized alert/event management and intelligent reporting to enhance observability, incident detection, and operational response.

PwC India – Principal Consultant Nov 2021 – Sept 2025
Bengaluru, India **Site Reliability Engineer — Carelon Global Solutions**

- Implemented CI/CD pipelines for Java microservices on OpenShift (OCP), enabling automated performance validation and improving deployment reliability.
- Managed deployment strategies, services, and HPA,PV, PVC configurations for microservices across production-grade Kubernetes environments.
- Built Datadog automated workflows for self-healing infrastructure, improving uptime and significantly reducing manual operational intervention.
- Managed AWS infrastructure including EC2, ASG, VPC, EKS, ELB, S3, and SNS using Terraform-based Infrastructure as Code.
- Developed Python utilities for OpenShift Container Platform (OCP) deployments by automating retrieval of the latest image tags from Quay and updating deployment configurations in Bitbucket.
- Developing new Python Utilities for EKS Platform with library like boto3,pandas,openai and prophet to scale automatically application based on user load.Built automation utilities using Bash and Python for system administration, log analysis, health checks, deployment support, and operational maintenance, significantly reducing manual intervention.

Site Reliability Engineer — W.R. Berkley

- Supported on-prem Kubernetes infrastructure hosting Guidewire PolicyCenter, ensuring platform stability, scalability, and production readiness.
- Improved Real User Monitoring (RUM), distributed tracing, and diagnostic logging for enhanced root-cause analysis and faster incident resolution.

- Built advanced Dynatrace dashboards using DQL for user behavior analytics and deep observability into application and infrastructure performance.
- Implemented synthetic monitoring, MQ recovery automation, pod rescheduling, and ServiceNow-integrated incident workflows using Dynatrace and Davis AI.Reduced MTTR through AIOps-driven anomaly detection, proactive alerting, and automated remediation workflows.

Site Reliability Engineer — IAG

- Managed performance testing environments hosted on on-prem Kubernetes including execution, monitoring, troubleshooting, and platform reliability support.
- Designed end-to-end CI/CD pipelines for automated performance testing using Apache JMeter integrated into build and release workflows.
- Built Grafana and New Relic dashboards for proactive monitoring of response time, throughput, error rates, and infrastructure health.
- Developed scalable reusable JMeter frameworks for load, stress, and endurance testing aligned to business-critical user journeys. Executed chaos experiments using LitmusChaos and Chaos Mesh to validate fault tolerance and improve service resilience.

Lexmark International – Senior Software Engineer Mar 2021 – Nov 2021
Kolkata, India

- Owned non-functional validation for enterprise printer platform services, defining and validating SLIs for latency, availability, throughput, and error rates.
- Engineered containerized Apache JMeter workloads using Docker and embedded them into CI/CD pipelines to enforce SLO-based release quality gates.
- Implemented synthetic monitoring and automated environment health checks to continuously protect service availability and error budgets.Improved production readiness by enabling proactive detection of reliability risks before release deployment.

Cognizant Technology Solutions – Associate Nov 2019 – Mar 2021

- Led non-functional validation for Discover Bank e-wallet payment platforms including Apple Pay, Google Pay, and Samsung Pay.
- Designed Apache JMeter performance testing frameworks integrated into OpenShift CI/CD pipelines for automated release validation.
- Developed Java-based SLI/SLO evaluation logic for release gates and production readiness decisions.
- Built AppDynamics dashboards and ELK-based observability pipelines for release-over-release performance comparison and incident diagnostics.

Tata Consultancy Services – Senior System Engineer Aug 2016 – Nov 2019

- Executed load, stress, and soak testing across enterprise applications to validate stability and reliability under peak usage conditions.
- Performed bottleneck analysis, capacity planning, and performance optimization in collaboration with application and infrastructure teams.Supported non-functional requirements and production readiness initiatives for Lloyds Banking Group retail banking applications.

Education

B.Tech in Electrical Engineering ,2012-2016

Certifications

AZ-900 — CKA — PCA

Languages

English (Proficient), Hindi (Proficient), Bengali (Native)
